ABOUT ME

I bridge the gap between the 'how it works' and the 'how it looks.' With a foundation in IT systems and a natural eye for branding and illustration, I thrive on turning complex ideas into simple, high-impact visuals. I'm ready to bring my unique blend of logic and creativity to projects that matter.

EDUCATION

2020 - 2026 **BACHELOR OF SCIENCE INFORMATION TECHNOLOGY**

College started with C++ basics. Year two added Java OOP, MySQL, and Cisco networking. Year three focused on web development with XAMPP and Laravel, plus Figma and animation. The final year Capstone Project combined Java, Laravel, and MySQL.

2018 - 2020 **INFORMATION AND COMMUNICATIONS TECHNOLOGY**

The ICT component was very practical and hands-on, starting with the History of the Computer. I gained basic hardware skills, including learning how to install operating systems and software using media like CDs or USB drives. A major practical task was learning networking from the ground up: we practice preparing and terminating UTP cables for wiring and physical connections.

WORK EXPERIENCE

2025 - 2026 **RYPACI IT SOLUTION | SOCIAL MEDIA AND UI/UX DESIGNER**

Over a three-month period, I progressed from social media management to full-scale interface design. I started by crafting high-impact social media banners and captions to drive brand engagement, which quickly evolved into designing responsive web layouts. My experience culminated in UI/UX design, where I applied my IT background to create seamless, user-centered digital experiences.

2023 - 2026 **ARR AGRI-BUSINESS CORPORATION | OFFICE STAFF**

I managed all corporate filing and record organisation. I handled daily data encoding and ensured database accuracy. I also provided first-line support for troubleshooting computer, printer, and software issues for staff.

2024 - 2025

ASSUMPTION COLLEGE OF DAVAO | CAPSTONE PROJECT

The Capstone Project from 2024 to 2025 at Assumption College of Davao, me and my teammates developed SKILLSERVE: An Android Mobile Application for Seamless Job Matching. We used Flutter for the cross-platform frontend interface and implemented the backend logic using Java/PHP. I was responsible for integrating key services, including Firebase for messaging and utilizing Google ML capabilities to power the application's efficient.

2023 - 2026

ASSUMPTION COLLEGE OF DAVAO | WEBSITE DEVELOPMENT PROJECT

My team and I developed a Booking Library Website, using HTML for the front end and Java/PHP for the backend logic. Then, managed the library's data structure and records in a MySQL database, utilizing phpMyAdmin as the management interface, all configured locally with XAMPP. This project enhanced my skills in database driven web application development.

SKILLS

- Web Design
- Design Thinking
- Wireframe Creation
- Problem-Solving
- Computer Literacy
- Front End Coding
- Project Management Tools
- Strong Communication
- Leadership
